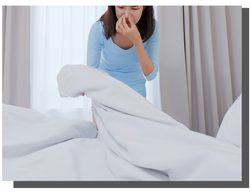
For a good night's sleep...

Hakuyosha's Futon cleaning

Do you just store your Futon after used in winter?



It could cause odor and yellowing
Annual cleaning is recommended
Even if it looks not dirty.

Futon cleaning recommended points

Drying in the sun alone does not make it clean

You could sweat for a cup over night! (approximately 200ml)

Disinfection spray does not remove soil even if the odor is gone.

Soil accumulates on the futon. Excessive use can also cause stains.

Mites cannot be exterminated.

A futon is a comfortable space for mites, and it could be a nest for them.

Growth of mold

If it stays damp, mold will form.

Leave the futon cleaning to the professionals

Comfortable sleep with a fluffy futon
